Services

⇒ ALTA/NSPS Land Title Surveying & Mapping

A successful renewable energy project starts with an accurate boundary survey to identify lease boundaries and easements early on, preventing potential setbacks. Partnering with a surveyor experienced in renewable energy can significantly mitigate development risks.

⇒ Topographic Surveying

A topographic survey provides essential details on land contours, elevations, and features, crucial for solar contractors and engineers. It aids in the optimal design and placement of solar panels by highlighting terrain variations and obstacles. This survey ensures informed decisions for efficient solar project execution, making it a key tool for accurate site analysis.

⇒ Construction Layout

We collaborate with developers from the initial planning stages through to construction, ensuring structures, access roads, limits of disturbance, and other project facilities are precisely laid out according to the design. This partnership guarantees that their projects are executed flawlessly and according to plan.

Why Choose us?

⇒ About Us

Decker Land Surveying is a family-operated business, deeply committed to the art and science of land surveying. We're not just a team; we're a family that loves to help our profession grow and thrive. We're also proud members of the New York State Association of Professional Land Surveyors (NYSAPLS), showing our commitment to excellence and keeping up with the latest in land surveying. Our goal is simple: to provide top-notch surveying services with a personal touch, ensuring every client feels like part of our family.

⇒ Experience

DLS boasts more than 30 years in the surveying field, having contributed to hundreds of renewable energy projects across New York State. We know how crucial it is to meet project deadlines. Our extensive experience adds significant value to every stage of renewable energy development.
